

Compton scattering of radiation in a strong magnetic field: Relativistic kinetic equation and cross-sections

D.I. Nagirner, A. Mushtukov

Sobolev Astronomical Institute, St.Petersburg State University (St.Petersburg, Russia)

The relativistic kinetic equation describing scattering of radiation by electrons in a strong magnetic field is derived using the methods of quantum electrodynamics and quantum kinetic theory. The cross-sections of the process and elements of absorption and redistribution over frequency, direction and polarization matrices are calculated.
