Evolutionary channels of massive neutron star creation

S. B. Popov, M. E. Prokhorov

http://ru.arXiv.org/abs/astro-ph/0412327

We discuss possible evolutionary channels which result in the creation of massive neutron stars in binary systems. In this paper we consider neutron stars with masses larger than $(1.8 - 2.0)\, M_{\odot}$. Also, we investigate the dependence of the channels on different parameters of the evolutionary scenario of binary systems. (See also astro-ph/0412327.)
